Experience

Software Engineer Trainee, Ericsson – Kirkkonummi, FI March 2024 – Present

- Ensured high availability for a large-scale cloud-native application, enhancing reliability and uptime
- Spearheaded the replacement of an outdated time-series database, overseeing prototyping, replacement, and migration, resulting in a 90% reduction in backup time and 95% smaller disk footprint
- Deeply involved in enhancing our Jenkins CI/CD pipelines, focusing on Kubernetes integrations to streamline deployments for large-scale analytics products
- Developed domain-specific backend services using Go, optimizing application efficiency and functionality

Founder, Vebbi – Helsinki, FI June 2023 – March 2024

- Founded a web design company that offers creative and innovative digital solutions
- Developed intuitive and swift websites with an average PageSpeed rating of 100% using Next.js
- Simplified content management for client websites by integrating Hygraph's CMS with GraphQL
- Designed visually-appealing websites and brand identities using Figma and Photoshop
- Grew client's organic website traffic by an average of 300% by implementing cutting-edge SEO strategies

Programming Teacher, Kodarit – Helsinki, FI Aug 2022 – Aug 2023

- Educated children aged 11-15 in Python and HTML programming using visual programming techniques
- Cultivated a passion for programming, increasing interest from 10% to 90% based on an opinion poll among children, by incorporating enjoyable and interactive learning methods
- Planned a curriculum rooted in pedagogical principles and informed by extensive studies on optimal methods for teaching embedded software programming to children

Education

University of Helsinki – Master of Science in Computer Science Expected May 2027

University of Helsinki – Bachelor of Science in Computer Science May 2025

- GPA 4.95/5.00
- Relevant courses: DevOps with Kubernetes, Full Stack Open, Software Engineering

Skills

Languages: Go, Python, TypeScript, C++ , SQL, HTML, CSS, PHP

Frameworks: Ent, React, Next.js, Node.js, Express.js, GraphQL, Tailwind, WebGPU

Containerization & Orchestration: Kubernetes, Docker, Helm, K3S

Projects

Datakolo github.com/3nd3r1/datakolo

- Built a headless CMS with a modular API architecture using Deno, MongoDB, and Next.js
- Designed and deployed a full CI/CD pipeline with GitHub Actions and Docker
- Optimized infrastructure for fast local development and containerized deployment
- Implemented dynamic content schemas with strict validation and API generation
- Achieved fast API performance with lightweight backend and minimal dependencies

Kubernetes Holygrail github.com/3nd3r1/kubernetes-holygrail

- Honed Kubernetes and DevOps expertise by creating a testing ground for advanced concepts and tools
- Built GitOps pipelines using ArgoCD, ensuring automated and efficient deployments
- Utilized service meshes like Linkerd to enhance traffic routing, and observability across microservices
- Designed fast production and staging environments with automated rollouts, and blue-green
